Recovery Pain Protocol - Nursing

- Click on the MAR in the Patient Chart menu.

- The MAR opens.

- Click on the task for the recovery pain protocol order. (morphine or fentanyl prefilled syringe).

- The Administration window opens.

- Enter all relevant fields including the most recent Pain Score. Mandatory fields are yellow.

- Click the green tick to sign.

- Continue to administer doses as required.

- After the third dose, contact the anaesthetist.

- If all 5 doses are administered, the order will cancel itself and drop to the Discontinued section of the MAR.

- If the patient does not require all the doses, the unwanted ones also need to be removed from the MAR to prevent them accidentally being administered on the ward.

- Right click on each of the remaining unwanted task(s) to mark them as Not Done.

- Select a Not Done reason (e.g. Not appropriate at this time)

- The order will then drop to the Discontinued section on the MAR.
